DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 2 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The term "high temperature" in claim 2 is a relative term which renders the claim indefinite. The term "high temperature" is not defined by the claim, the specification does not provide a standard for ascertaining the requisite degree, and one of ordinary skill in the art would not be reasonably apprised of the scope of the invention. How high is high?

The term "excellent" in claim 2 is a relative term which renders the claim indefinite. The term "excellent" is not defined by the claim, the specification does not provide a standard for ascertaining the requisite degree, and one of ordinary skill in the art would not be reasonably apprised of the scope of the invention. How excellent is excellent?

Art Unit: 1745

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in-

the treaty defined in section 351(a).

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under

Claims 1-3 rejected under 35 U.S.C. 102(e) as being clearly anticipated by Prengaman U.S. Pub. 2001/0009743.

The reference teaches a lead acid battery grid made from a lead based alloy containing calcium, tin, and silver having the following composition: calcium above 0.06 and below 0.082%, tin above 1.0% and below 1.2%, silver between 0.005 and 0.020%, and optionally containing up to 0.025% aluminum. (abstract). Barium may be present in the amount from 0 to 0.05%. The reference also teaches that the lead acid cells having a plurality of cells wherein each cell has plurality of positive and negative grids (col. 1 par. 3 and par. 7). Because the grid is made of the same material as the subject invention it inherently does not require a high temperature hardening step during manufacturing.

Art Unit: 1745

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Prengaman U.S. Pub. 2001/0009743.

Prengaman teaches a lead acid battery grid as described hereinabove. The reference also teaches that low amounts of silver eliminate the need of expensive refinement to recover silver before disposal (par. 40).

However, the reference does not with specificity teach silver in the amount of 0.006-0.010%, barium at 0.015 –0.025 nor the elimination of a high temperature hardening step.

However it would be obvious to one of ordinary skill in the art at the time the invention was made to employ the silver in the amount of 0.006-0.010%, in order to eliminate the need of expensive refinement to recover silver before disposal.

Regarding low elements of barium, the reference teaches that only trace amounts of the impurities should be present (par. 29), rendering it obvious to employ low amounts of barium.

Art Unit: 1745

Regarding the elimination of a high temperature hardening step, it would be reasonable to expect the hardening step to be eliminated, because low amounts of silver employed would eliminate this step required for silver containing alloys.

Further the elimination step is defining the product by a process. However, a product defined by the process by which it can be made is still a product claim (In re Bridgeford, 149 USPQ 55 (CCPA 1966)) and can be restricted from the process if the examiner can demonstrate that the product as claimed can be made by another materially different process; defining the product in terms of a process by which it is made is nothing more than a permissible technique that applicant may use to define the invention.

Conclusions

Any inquiry concerning this communication or earlier communications from the Examiner should be directed to Monique Wills whose telephone number is (703) 305-0073. The Examiner can normally be reached on Monday-Friday from 8:30am to 5:00 pm.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Group receptionist whose telephone number is (703) 308-0661.

If attempts to reach Examiner by telephone are unsuccessful, the Examiner's supervisor, Patrick Ryan, may be reached at 703-308-2383.
